

Jeff --

We have a success story I would like to share with you.

On Monday, January 30 our crews (along with several mutual aid departments) responded to a rapidly spreading grass fire that spread to a number of vehicles, trailers and other equipment. While extinguishing the fire in one of the involved vehicles, the crew experienced difficulty extinguishing the fire because it involved magnesium parts (believed to be the transmission housing). They used the 2-1/2 gallon F-500 extinguisher to rapidly and successfully extinguish the burning magnesium.

Thanks.

**Tim Bogisch**
