Subject: F-500 test

Attn: Bob

Shortly after we received the F-500 I premixed some F-500 in our Water tank on our Fire Truck (750 Gal. of Water) and it was in the tank for about 2 weeks. We received a Fire call of a Combine that was burning, when we got out there, about 2 miles from town we found a brand new 9600 John Deere combine fully a blaze. Like I'm talking 200 gallons of Diesel fuel, hydraulic fluid, the rubber tires and grain dust, all ablaze. I actually forgot that I had put the F-500 in the water tank so I got on the Cell Phone trying to get some extra water because I didn't think we had enough... as the story goes we had the fire out in about 4 minutes and we used less than half a tank of water. UNREAL... I'll tell you, I am telling anyone that will listen to me about F-500 and how great it is.

Would you please send me the training video on F-500

Send it to Darrell Kraft, Box 415, Allan, Sask. SOK OCO
